
$e_1 = 1.0 \times 0.7$

$e_1 \rightarrow e_2 = P(High|'e') \cdot P('e' \rightarrow 'e') \cdot P(Low|'e') = 0.7 \times 0.6 \times 0.3 = 0.126$

$e_1 \rightarrow v_2 = P(High|'e') \cdot P('e' \rightarrow 'v') \cdot P(Low|'e') = 0.7 \times 0.4 \times 0.9 = 0.252$
